

GO-LIVE READINESS NOTE

The Northstar Sprint – Support Deflection MVP

Version 1.0 • 15 August 2026

Overall Quality Decision

READY WITH LIMITATIONS

Document History

Version	Author	Date	Change
0.1	Lerato Phelane	14/08/2026	First draft
1.0	Lerato Phelane	15/08/2026	Updated test metrics, resolved placeholders, updated interface description, added live URL, and set final readiness decision.

1. Purpose

The purpose of this Go-Live Readiness Note is to provide a clear summary of the Northstar Sprint Support Deflection MVP's readiness for handover. It outlines what works, what is known to be limited, and what Northstar needs to know to take over and continue using or developing the MVP without the project team present.

2. What Works

The MVP is designed to reduce manual ticket handling for two of Northstar's repetitive support categories. The selected scope is:

- **Order Status** – helps customers answer questions such as “Where is my order?” and “Has this shipped yet?”
- **Returns & Refunds** – helps customers answer questions such as “How do I return this?” and “When will I get my refund?”

The agreed solution approach is a guided self-service web interface. The implementation has been tested against the selected customer journeys.

3. Limitations / Known Issues

The following limitations should be considered before any production deployment.

Issue	Impact	Workaround
Order status uses sample / simulated responses.	The MVP does not provide real-time order tracking.	Use sample order numbers for demonstration.
Returns and refunds use simulated responses.	The MVP is not connected to a live returns/refunds system.	Use the guided return flow for demonstration.
No live backend or customer database integration.	Production customer/order information cannot be retrieved.	Backend integration is required for production use.

4. Testing and Quality Status

Testing covers the Order Status and Returns & Refunds customer journeys, including normal requests, incorrect or incomplete inputs, guided responses, and whether the MVP provides an appropriate final response.

Testing Measure	Status
-----------------	--------

Test cases executed	5
Passed	5
Failed	0
Blocked	0
Open Defects	0 confirmed at time of handover

5 / 5 TESTS PASSED	0 FAILED	0 OPEN DEFECTS
--------------------	----------	----------------

5. Handover Documentation

Repository / Source Location	GitHub repository – collinskiplangatrotich/northstar-support-mvp
Final MVP Version	Northstar Support Deflection MVP v1.0
Date	15/08/2026
Technology	HTML5, CSS3 and JavaScript (ES6)
Deployment	GitHub Pages
Dependencies	No external libraries or backend services are required for the current prototype.

Configuration & Test Data

The MVP uses sample/test customer and order information to demonstrate the Order Status and Returns & Refunds journeys. No real customer information is used in the demonstration environment.

How to Start / Access the MVP

1. Open the GitHub repository.
2. Open the deployed GitHub Pages site once deployment is confirmed.
3. Select either **Track My Order** or **Returns & Refunds**.
4. Enter an order number or select a return reason and submit the request.

Environment / Access Limitations

The current solution is an MVP/prototype and is not connected to Northstar Retail Co.'s live order, returns, refund, or customer systems. Further backend integration, security, authentication, and performance testing would be required before production deployment.

6. Handover Contacts & Ownership

Project / Team Lead	Collins Rotich
Technical Owner	Collins Rotich
Product Client / Contact	Northstar Retail Co
Post-Handover Support / Escalation	Joseph Nguma

7. Readiness Decision

READY WITH LIMITATIONS

The MVP is demonstrable and supports the selected customer journeys. However, it currently uses sample/test data and simulated responses and is not integrated with live order, returns, refund, or customer systems. Further development would be required before production deployment.

Handover Note: This document reflects the current MVP/prototype state and should be updated if further testing, defects, integrations, or deployment changes occur.
